How to Study at University: A First-Semester System That Works

Replace secondary-school cramming with a repeatable weekly study routine

STUDY SKILLS

Study Skills

General Studies (GST / CED)
GST Directorate | 100L

Written for students, by students.

Practical notes, worked examples, practice questions and a revision plan.

Free to download. No fee, no payment step, no watermark.

Independent study support | Not an official UNIZIK publication

Why this pack exists

University rewards independent work, and many freshers keep using a method built for supervised secondary school. This pack sets out a weekly system: preparing before lectures, processing notes after them, and revising in spaced cycles instead of one desperate week.

This is a student-written study companion, not a reproduced lecture handout or a leaked examination paper. Use it to organise the topics you are taught, practise the kind of thinking your course rewards, and walk into class with better questions.

What you will be able to do

- Explain how university assessment differs from secondary-school assessment.
- Build a weekly timetable that covers all courses without cramming.
- Use pre-lecture, during-lecture and post-lecture routines.
- Choose study techniques supported by evidence rather than comfort.

How to use this pack

1. Skim the whole pack once in 20 minutes so you know what is inside.
2. Work through one section at a time with your lecture note and recommended text beside you.
3. Attempt the practice questions before reading the answers. Mark what you missed.
4. Use the final checklist to plan your revision week, one tick per study session.

> **Free to download, always**
> This pack is free. There is no fee, no subscription and no payment step before download, and the full PDF is not watermarked or locked. Share the link with a coursemate instead of forwarding the file.

> **Confirm your official course outline**
> Course codes, credit units and outlines can differ by department and session. Treat this pack as supplementary support and confirm the current outline with your lecturer, course rep or departmental handbook before an assessment.

What changed

At university you are responsible for noticing what you do not understand.

- Lectures cover selected material; reading and practice fill the gaps.
- Assessment is often cumulative and less predictable than WAEC-style papers.
- Nobody checks your notes weekly, so weaknesses surface late.
- Continuous assessment, assignments and attendance carry marks.
- The volume is larger, so passive reading cannot keep pace.
- A system beats motivation: you need a routine that works on bad days.

The weekly cycle

Treat each course as a cycle rather than a single event.

1. Before the lecture, skim the topic for ten minutes and write two questions.
2. During the lecture, capture structure and examples, not a transcript.
3. Within a day, rewrite the notes in your own words and fill gaps from a textbook.
4. Two days later, test yourself without notes.
5. At the weekend, do practice questions and update your weak-topic list.
6. Before the next lecture, review the previous week for five minutes.

> **The two-day rule**
> If you have not revisited a lecture within two days, you are effectively learning it again from scratch. Short, early reviews save hours later.

Techniques that earn their place

Use methods with evidence behind them and drop techniques that only feel productive.

- Retrieval practice: close the book and write what you remember.
- Spaced repetition: revisit at increasing intervals rather than rereading repeatedly.
- Interleaving: mix problem types so you learn to choose a method, not just apply one.
- Elaboration: explain why a fact is true and connect it to what you know.
- Avoid highlighting as a primary method; it produces recognition, not recall.
- Study in 40-minute blocks with short breaks and a phone out of reach.

University is a different kind of study

In secondary school someone decided what you would learn, checked daily that you had learned it, and tested you on it in the same form it was taught. At university you are given a reading list and a deadline. Nobody checks whether you understood week three. That shift - from supervised coverage to self-managed understanding - is the single biggest reason capable students struggle in first year.

The practical consequence is that you must build your own feedback loop. There is no teacher checking your notes, so you check them: can you explain the concept without looking, can you answer a past question on it, can you identify what you still cannot do?

A semester has roughly twelve to fourteen teaching weeks. Divide the syllabus by those weeks now, at the start, and you have a map. Students who discover this map in the week before examinations are not lazy; they were never shown the arithmetic.

The weekly routine that actually works
