Why this pack exists

Running out of money mid-month is usually a planning problem rather than an income problem. This pack shows you how to track spending for one week, build a realistic monthly budget, separate needs from wants, and create a small emergency fund without pretending rice is optional.

This is a student-written study companion, not a reproduced lecture handout or a leaked examination paper. Use it to organise the topics you are taught, practise the kind of thinking your course rewards, and walk into class with better questions.

What you will be able to do

- Track actual spending and identify waste without guilt.
- Build a monthly budget based on real categories and costs.
- Apply a rule for separating needs, wants and emergencies.
- Start a modest emergency fund and avoid predatory borrowing.

How to use this pack

1. Skim the whole pack once in 20 minutes so you know what is inside.
2. Work through one section at a time with your lecture note and recommended text beside you.
3. Attempt the practice questions before reading the answers. Mark what you missed.
4. Use the final checklist to plan your revision week, one tick per study session.

> **Free to download, always**
> This pack is free. There is no fee, no subscription and no payment step before download, and the full PDF is not watermarked or locked. Share the link with a coursemate instead of forwarding the file.

> **Confirm your official course outline**
> Course codes, credit units and outlines can differ by department and session. Treat this pack as supplementary support and confirm the current outline with your lecturer, course rep or departmental handbook before an assessment.

Know where the money goes

You cannot budget what you have not measured. Track for seven days before changing anything.

- Record every payment, including small transport and data top-ups.
- Group spending into food, transport, data, accommodation, academic materials, social and other.
- Compare planned and actual totals at the end of the week.
- Find the leak categories: often snacks, unplanned outings and duplicate data bundles.
- Keep tracking for a month before making big changes.
- A notebook works; a spreadsheet or notes app works too.

Build the budget

A budget is a plan for money you have, not a wish list.

1. Estimate total monthly income: allowance, support, side income.
2. Put fixed costs first: rent, transport, feeding, data, academic materials.
3. Set a realistic food figure using actual meal costs, not wishful numbers.
4. Allocate a small social and discretionary amount deliberately.
5. Set aside a fixed amount for savings and emergencies before spending.
6. Adjust after the first month using real data, not optimism.

> **Pay yourself first**
> Move the savings amount out of the spending account at the start of the month. What remains is the budget; savings are not what is left over.

Saving and borrowing rules

Small, consistent savings beat occasional large intentions.

- Aim for a small buffer that covers transport, food and one unexpected cost.
- Use a separate account or wallet so the money is less visible.
- Never borrow to fund a want; borrow only for a genuine emergency.
- Avoid loan apps with short tenors and extreme fees.
- Never guarantee a loan for a friend or share your account details.
- Review your budget monthly and keep one record of what worked.

Where the money actually goes

Almost every student who says money disappears without knowing where is right: it does disappear, but not without a pattern. Track every naira for four weeks - notes or a simple spreadsheet - and the pattern appears within a fortnight. Until you have data, a budget is a wish.

Student spending concentrates in four places: food, transport, data and social. The last is the one people underestimate, because it arrives in small amounts and is hard to refuse. Naming it is the first step to controlling it.

Set a weekly figure rather than a monthly one. A monthly allowance is usually exhausted by day ten because the first week absorbs setup costs and the second absorbs social pressure. Weekly limits are easier to hold and easier to correct.

Budgeting that survives a lump sum
